

## Theory of operation – Driving School

**1.** The attraction starts with a queue system, that can be used as an opportunity to provide information or marketing, If a driving license is to be provided after the ride, the photos can be taken here.

**2.** Before the children enter the track they will get instructions on basic traffic rules and signs. This Information can be provided verbally by a staff member, through signs or by showing a video.

**3.** Gates open and children are instructed by operator(s) to find a vehicle on the track. The kids get seated and fasten their seat belts, operators make sure all kids have done so.

**4.** The operator informs that the ride will start and presses the green button on the R/C transmitter, which turns on all vehicles at once. Children push the accelerator pedal to drive and brake pedal to stop.

**5.** After about 3-5 minutes the operator presses the red button on the R/C transmitter, which turns off all vehicles, and informs that the ride is finished. Children release the safety belt and exit the track.

**6.** If driving licenses are sold/given, there will be a place to pick them up in conjunction to the exit. Next group of children is ready to enter the track. Repeat the whole process.
